

1. Technical Solution Innovation

The other brand Bluetooth card on the market usually has a battery life about 6 months, and some better one can be used for about 12 months.

But the Bluetooth card produced by YCH, the entire design concept is completely from the perspective of low power consumption.

With conventional Bluetooth cards, our battery life can be used longer than one and a half years. The ultra-low power consumption card designed by YCH can have a super long battery using life, which can be used at least 2.5 years. (Battery model CR2032, brand: Panasonic, one card with 2 Battery as standard);

2. YCH Card Very Hard To Copy

The other brand Bluetooth card on the market has low chip cost and low encryption level.

YCH Bluetooth card adopts a high-level encryption technology, so YCH Blue Cards is more difficult to copy ,so our blue cards can improves the security level of the entire community. And In addition, property companies can easily make a profit.

3. Comprehensive cost-effective

After many years of technological precipitation and accumulation, YCH have very rich experience in the radio frequency field. We do R & D and production of all series of stable and reliable long-distance RFID reader. And sell to foreign country Wholesalers or projects integrator directly, so we can have an absolute advantage in cost.

4. Production Line Extension

YCH not only designs a series of long-distance card readers, but we are also expanding the cloud access control system in depth, which can provide customers with a series of complete hardware and software solutions, and further expand product encryption technology to ensure maximum security, To prevent random copying of cards and protect customers' economic interests.

5. Can Penetrate VKOOL Explosion-Proof Membrane

We use a car with VKOOL metal explosion-proof film for card reading test. The card is placed in the car, the window is closed, the car is quickly driven, and the YCH Bluetooth card reader can quickly read the card in a range of about 10 meters. After the card number is collected by YCH Bluetooth reader, it will be quickly detected and processed, and the card number will be quickly transmitted to the control board, so car can go through barrier gate with fast speed but without stopping car.

6. Can Detect Fast Speed Car

The YCH Bluetooth card reader uses a unique chip control program, so it has a very fast response capability. When the car passes the reader at a speed of 60 km / h, our reader can respond quickly and collect the card information. Thereby opening the barrier and improving the overall comfort feeling.

7. Rainy Day Application, avoid being wet by rain, Reduce the risk of theft

Many countries in Southeast Asia have a lot of thunderstorms. For traditional short distance cards, you need to stop the car, roll down the window, and stick out your hand to read the card. This way, our clothes are easily wet, and in addition, if we shake the window, we may be caught by people. These unsafe hidden dangers, YCH Bluetooth card reader can easily solve;
